Comments / notes on tonight's mission and this interpretation: Retrieved last shapefiles from incident folder on NIFC FTP site from 7/22 2231 IR flight. No growth. Intense heat marked in two small areas in southeast near east perimeter due to dense cluster or heat signatures. Two small scattered heat spots just south of intense areas. All other areas have isolated points 150' or more apart. Isolated spot in far west nw corner of section 28, east of Lark Canyon. Two isolated spots in far north arm near Pine Valley in section 22, mid-slope facing town. All other heat in south east arm in bottom of Lloyd Creek and on both side slopes, section 34. All isolated points have a lat/long in the attribute table. TWO HEAT SIGNATURES APPEARED IN UPPER PINES CAMPGROUND - ONE NEAR SOUTHERN TIP PINE VALLEY RESERVOIR (37.376943, -113.4734) AND ON EASTERN PART NEAR ENTRANCE ROAD (37.375422, -113.465061). CAMPFIRES ARE SUPPOSED SINCE THERE WAS ALSO HEAT THERE ON 7/22 IMAGERY AND NO CLOSURE FOR CAMPGROUND IS KNOWN.
